

Modular gas deck oven

2 decks composition

serieP gas consists of one or more independent baking chambers and an optional proofer or stand. The baking surface is made of refractory stone allowing the perfect heat distribution over the whole surface and making this oven particularly suitable for direct pizza baking, on floor or on trays.

Temperature management is electronic. The oven door is hinged at the bottom, with a tempered glass window to check the product during baking. The stand consists of a painted metal structure, while the proofer is a stainless steel cabinet equipped with a heating thermostat. The proofer can reach the maximum temperature of 149°F, whereas the maximum temperature of the baking chamber is 842°F.
